

Step-by-step outline for updating the QBOT V3/QBOT V3 Pro app

Before proceeding, visit the app Settings (yellow button on homescreen), and take a screenshot of the settings. After updating the app, confirm the Settings are correct, reset them to your specifications if necessary.

1. From the tablet homepage (circle icon on the border of your tablet), press the Settings/Gear icon and
 1. turn Airplane Mode OFF
 2. turn Wifi ON
2. Go back to the tablet homepage (circle icon)
3. Press the Google PlayStore or Amazon Appstore icon to open the app
 1. login to your account
 2. locate your purchased apps
 3. update the QBOT V3/QBOT V3Pro app - and any others that show as needing to update
4. Go back to the tablet homepage
5. Turn off/reboot your tablet - this is not simply pressing the power button, rather you need to completely power-down your tablet to reboot. Some tablets have you 'press-and-hold' the power button and then 'slide' the slider to confirm you wish to reboot.
6. Cycle the power on your QBOT Head (turn power off then on)
7. From the tablet homepage, press the Settings/Gear icon to set things the way you want them for QBOT Quilting:
 1. **turn Wifi OFF**
 2. **turn Airplane Mode ON**
 3. **turn Bluetooth ON**
8. Press the QBOT V3/QBOT V3 Pro app icon to open the app
9. Press the yellow "Connect" button to reestablish the connection between the QBOT Head and the tablet/app
10. Press the yellow "About" button to confirm the app version has been updated

If you have a dedicated tablet (using it for QBOT quilting only), you will always be quilting with these tablet settings:

1. **Wifi OFF**
2. **Airplane Mode ON**
3. **Bluetooth ON**

As a result of these tablet Settings, you have eliminated any unwanted, outside network/communications interference. But also as a result of these settings, your tablet can never 'automatically' check for updates. You will need to manually do this - repeating the above outline.

How will you know when to update the QBOT V3/QBOT V3 Pro app? Visit our Support/FAQ page to see the current app versions.
